AMENDMENTS TO THE CLAIMS:

Please cancel Claims 29 through 33 and 39 through 43 without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 34 through 38 and 44 through 48 as follows:

1 - 33. (Cancelled)

34. (Currently Amended) An image capture apparatus comprising:

an image capture unit that captures image data images; and

a setting unit adapted to set the number of pixels and a compression ratio
individually according to a user request; and

a control unit that controls the number of pixels of each of the images according to the number of pixels set by said setting unit and a compression ratio of the image data applied to the images according to the compression ratio set by said setting unit.[[,]]

wherein the control unit controls the number of pixels and the compression ratio of the image data according to the number of pixels and a compression ratio selected by the user.

35. (Currently Amended) An apparatus according to claim 34, further comprising:

a display unit that displays information indicating the number of pixels and the compression ratio selected by the user individually set by said setting unit.

36. (Currently Amended) An apparatus according to claim 34, further comprising:

a recording unit that records the image data images controlled by the control unit.

37. (Currently Amended) An apparatus according to claim 34, further comprising:

a wireless transmitting unit that transmits the image data by wireless transmission images controlled by the control unit wirelessly.

38. (Currently Amended) An apparatus according to claim 34, further comprising:

a display unit that displays information indicating the number of pixels and the compression ratio selected by the user, individually set by said setting unit;

a recording unit that records the image data, images controlled by the control unit; and

a wireless transmitting unit that transmits the image data by wireless transmission images controlled by the control unit wirelessly.

39 - 43. (Cancelled)

44. (Currently Amended) An image capture apparatus comprising:

an image capture unit that captures image data images; and

a setting unit adapted to set a frame rate, the number of pixels, and a

compression ratio individually according to user requests; and

a control unit that controls a frame rate applied to the images according to the frame rate set by said setting unit, the number of pixels of each of the images according to the number of pixels set by said setting unit, and a compression ratio of the image data applied to the images according to the compression ratio set by said setting unit. [[,]]

wherein the control unit controls the frame rate, the number of pixels, and the compression ratio of the image data according to a frame rate, the number of pixels, and a compression ratio selected by a user.

45. (Currently Amended) An apparatus according to claim 44, further comprising:

a display unit that displays information indicating the frame rate, the number of pixels, and the compression ratio selected by the user individually set by said setting unit.

46. (Currently Amended) An apparatus according to claim 44, further comprising:

a recording unit that records the image data images controlled by the control unit.

47. (Currently Amended) An apparatus according to claim 44, further comprising:

a wireless transmitting unit that transmits the image data by wireless transmission images controlled by the control unit wirelessly.

48. (Currently Amended) An apparatus according to claim 44, further comprising:

a display unit that displays information indicating the frame rate, the number of pixels, and the compression ratio selected by the user, individually set by said setting unit:

a recording unit that records the image data, images controlled by the control unit; and

a wireless transmitting unit that transmits the image data by wireless transmission images controlled by the control unit wirelessly.
